PRINCE NZAMUWE

Data Science & Analytics — Machine Learning · Data-Driven Apps · Backend Development

Nairobi, Kenya · +254 757 723 708 · prince@nzamuwe.com

github.com/princenzmw · linkedin.com/in/princenzmw · credio.streamlit.app

PROFILE

Data science and backend-focused 3rd-year BSc Data Science & Analytics student at USIU-Africa (expected 2028). Builds data-driven applications end to end: PostgreSQL data models, Python machine learning, FastAPI services and React front ends — tested and deployed. Trained through the ALX Software Engineering Programme (Foundations Phase) and Andela's ATLP. Open to data, ML and software internships; available for freelance data analysis, dashboard and web development projects.

PROJECTS

Credio — Credit-Risk Scorecard (github.com/princenzmw/credit-risk-scorecard · credio.streamlit.app)

Python, scikit-learn, pandas, Streamlit, pytest, GitHub Actions.

- Built a leak-free credit-default pipeline on 150,000 borrowers: handled special codes and 20% missing income inside the scikit-learn pipeline; gradient boosting reached 0.869 ROC-AUC and 0.407 PR-AUC on a held-out test set (logistic baseline: 0.823 on validation).
- Produced calibrated risk bands (observed default 1.1% to 39.0%) and a cost-based approval threshold; tested class weights and SMOTE and rejected both because they distorted predicted probabilities.
- Deployed a Streamlit app with per-applicant explanations, 19 unit tests and GitHub Actions CI.

FinAccess Kenya — Financial Inclusion Dashboard (github.com/princenzmw/finaccess-kenya-dashboard)

Power BI (DAX), Python, pandas.

- Built a five-page Power BI dashboard on the 2024 FinAccess survey (19,750 adults, survey-weighted to 28.1 million) covering access, county gaps, digital credit and exclusion drivers.
- Wrote a streaming prep script that turned a 290 MB workbook into an 8 MB CSV and reconciled weighted results to the published topline (84.8% formal access, 9.9% excluded).
- Found county formal access ranging from 48.5% to 94.0%, and 63% exclusion among adults without an ID vs 5% with one.

DukaPulse — Stock & Sales App for Small Shops (in development — links publish with v1.0)

FastAPI, PostgreSQL, React, TypeScript, Docker.

- Building a full-stack stock and sales app with JWT authentication, owner and staff roles, and sales that cannot oversell stock; 4-week demand forecasts per product, backtested against a seasonal-naive baseline.
- pytest backend suite + Playwright end-to-end tests; CI on GitHub Actions; deploy targets Vercel, Render and Neon.

AirBnB Clone v4 (github.com/princenzmw/AirBnB_clone_v4)

- Four-iteration full-stack build: CLI console → SQLAlchemy ORM → Flask REST API → dynamic web frontend, with unit tests throughout. Python, MySQL, Docker.

EXPERIENCE

Apprentice — Andela Technical Leadership Program (ATLP) Rwanda · Jan 2024 – Sep 2024

- Shipped features of a full-stack e-commerce app (TypeScript, React, PostgreSQL) in a 9-person Agile team and performed code reviews; designed the normalized PostgreSQL schema for products, users and orders.

Trainee — Ida Technology (NEET program) Rwanda · Dec 2023 – Jun 2024

- Built Django/React web apps with JWT authentication; converted Figma designs into responsive React components.

SKILLS

Data & ML	Python (pandas, scikit-learn), SQL (PostgreSQL, MySQL), Power BI (DAX), R, MATLAB, Excel
Web & Software	FastAPI, Django, Flask, TypeScript, JavaScript, React, REST APIs, JWT authentication, Streamlit
Tools & Practice	Git/GitHub, GitHub Actions (CI), Docker, pytest, Playwright, Agile teamwork, code review, Figma-to-code

EDUCATION

BSc Data Science & Analytics — United States International University – Africa (USIU-Africa), Nairobi

2024 – expected 2028 (3rd year)

Relevant coursework: Statistical Modeling, Machine Learning, Statistical Inference, Data Warehousing & Mining, Optimization, Statistical Computing, Data Structures & Algorithms, Database Systems.

ALX Software Engineering Programme (online) — completed the 9-month Foundations Phase; project repositories on GitHub.

CERTIFICATIONS

Back-End Developer Certificate, Meta · JavaScript Algorithms and Data Structures, freeCodeCamp · Artificial Intelligence Fundamentals, IBM SkillsBuild
